

About PRES Services

PRES Services has four main operating divisions that address various aspects of Property Strategy and Energy Cost Management which have significant impacts on the customer's bottom line.

PRES Energy

Full service energy cost management business focused on “behind the meter” (Energy Efficiency) system design, optimization, and project implementation. This is the historical ‘core’ for PRES Services with growth of affiliate businesses to provide related and complementary services.

PRES Energy Finish Line

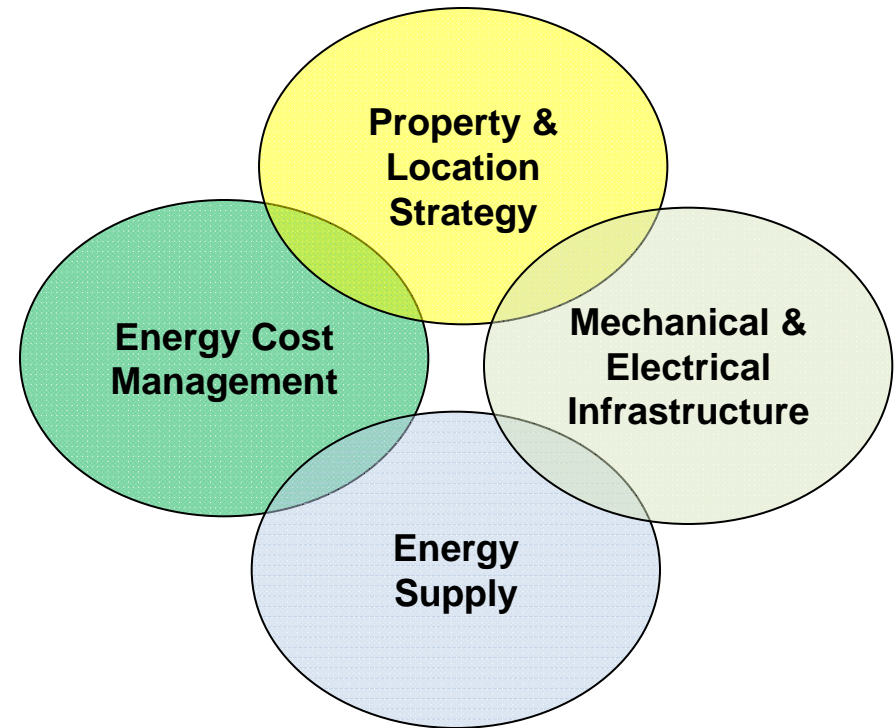

Supply side portfolio management and energy procurement.

PRES Design Build

Primarily focused on mechanical and electrical systems design-build construction implementation.

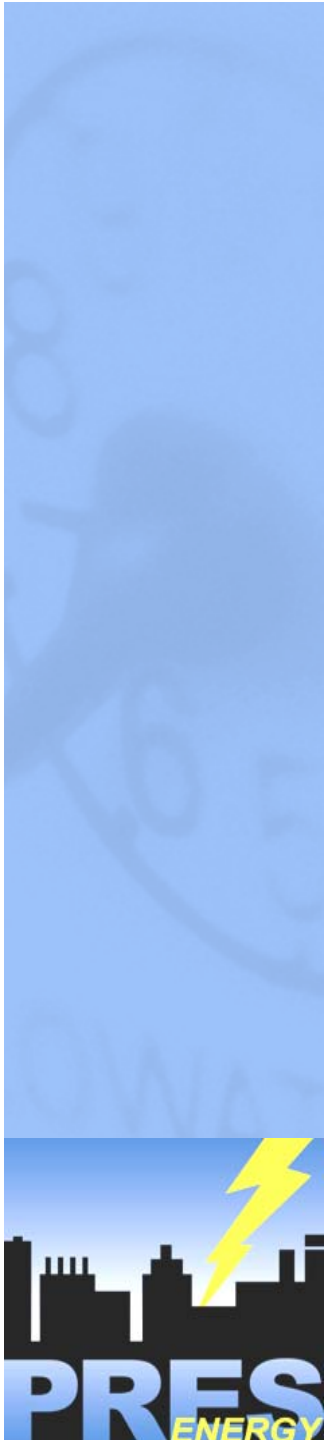

PRES Location Strategies

Business location analysis and property management consulting services.

Our focus is eliminating property spending waste:

- The cheapest energy is that **not** used.
- The most effective building is the smallest one that supports the business.
- The most efficient travel is that which is avoided.

PRES Differentiators

Our “Business Generalist” Approach

- We understand facilities design, construction, and real estate operations. Our focus is helping customers work through all the business decisions that form a comprehensive strategic direction.

Objective Focus on Client Fiduciary Interests

- Our working relationship with clients is that of a fiduciary agent; customer interests come first.

Lean Organization Structure

- Our complimenting affiliate structure lets us attract and retain top talent to operate at below-market margins while providing focus within each service offering.

The result is a recognizable group of satisfied customers...
